While this National Ground Water Association (NGWA) guideline represents the consensus work product of NGWA and its members after careful study and deliberation as of the date of this document, this guideline does not, and cannot, reflect variances in local and state law, custom, and practice in a certain locality or regional geology. It is a guideline, not a mandatory one. Those relying upon the guideline are encouraged to make their own independent assessment and evaluation of options as to appropriate practices for their business and in the geographic region of their work. NGWA does not endorse any product or product type for groundwater system construction or groundwater system operation, including those related to monitoring and remediating groundwater, and does not approve, certify, or test any such products.

Trademarks and copyrights mentioned within this document are the ownership of their respective companies. The names of products and services presented are used only in an educational fashion and to the benefit of the trademark and copyright owner, with no intention of infringing on trademarks or copyrights. No endorsement of any third-party products or services is expressed or implied by any information, materials, or content referred to in this document. The absence or mention of any product or service judged by others as relevant to this document is unintentional and does not express or imply anything about the product's suitability or appropriateness.

This publication is a collaborative effort to try to set forth best suggested practices on this topic but science is always evolving, and individual situations and local conditions may vary, so members and others utilizing this publication are free to adopt differing standards and approaches as they see fit based on an independent analysis of such factors. This publication is provided for informational purposes only, so members and others utilizing this publication are encouraged, as appropriate, to conduct an independent analysis of these issues. The NGWA does not purport to have conducted a definitive analysis on the topic described in this publication, and it assumes no duty, liability or responsibility for the contents or use of the publication.

Cover design: The cover design is abstract and not intended to match the molecular structure of PFAS chemicals.
